# Logs

1

Quick Statistics about how many logs, busiest operator and client.
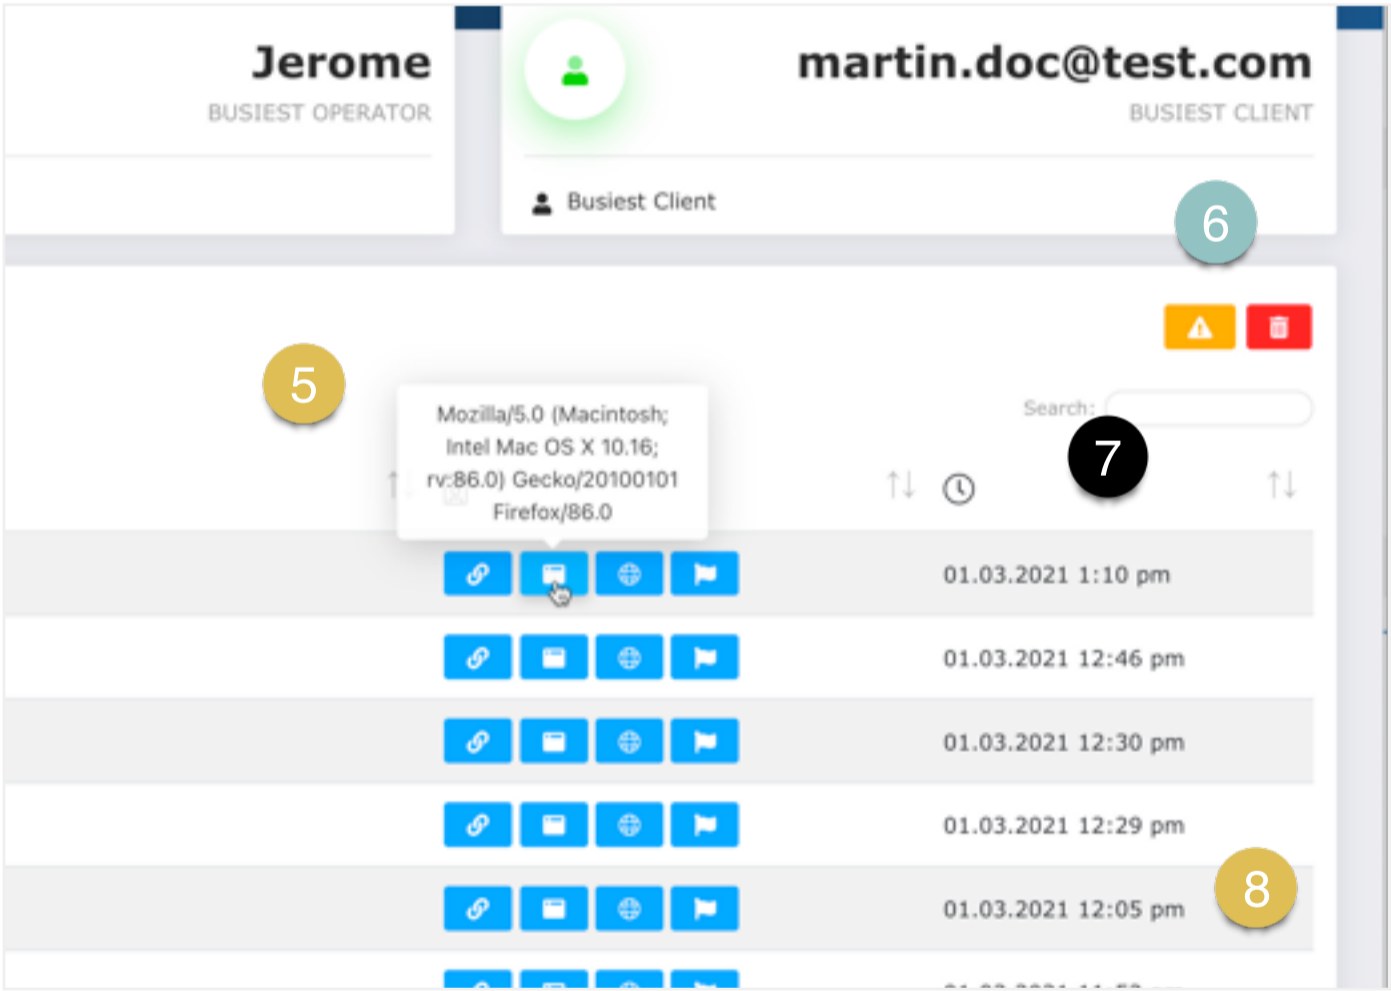

2

All logs can be found in the table below, as always you can display more and change order.

3

To change the order of the table simply click on the small arrows next to each column. Filter by more than one by using the shift key.

4

The blue buttons give you a lot of information about the log file. See below for more information.

5

Hover over any of the blue button to get more information about a certain log entry.

6

Delete a single log entry or truncate the complete log table.

7

Search after a certain log file.

8

The date and time when the log file has been created.
